

MANIFOLDS

HEAVY DUTY INLINE STAINLESS-STEEL MANIFOLDS

Technical Description:

The heavy duty inline stainless-steel manifolds provide simple and robust manifolds which is perfect for aggressive water and oils.

Additionally, the manifolds allow for quick mould change and eliminates piping errors. The design also allows the possibility of maximum unrestricted flow rate through each channel.

The manifolds are available in a variety of sizes, both for inlet/return diameter and number of channels.

Installation:

The heavy duty stainless-steel manifolds require a set of two brackets for correct installation. Electro plated steel brackets are available in the Mouldpro catalogue and Webshop alongside the manifolds.

Additionally, it is recommended to use appropriate blanking plugs with O-ring. These are also available in the Mouldpro catalogue and Webshop alongside the manifolds.

Properties:

Material:	Stainless steel (AISI 304)
Operating temperature:	-20°C to +200°C
Maximum operating pressure:	10 bar
Thread:	BSPP
